

EXPERIMENT 4

ROLL NO: 240701382

NAME: PERIYA NAYAGAM M

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using proto.io.

Screen 1 – Login Page

Familiar Icons

1. Back Arrow (←) – Top Left Corner

This is a very common icon used in almost all mobile apps.

When the user clicks this arrow, it will move to the previous screen.

2. Login Button

The login button is a normal action button used in most applications.

After entering the details, the user clicks this button to access their account.

3. Username and Password Fields

These input fields are standard elements used in login pages.

Users enter their credentials here to sign in to the application.

Screen 2 – Tourist Place Selection

Familiar Icons

1. Destination Cards (Bali, Paris, Goa, etc.)

Showing places in card format is commonly used in travel apps.

It helps users easily view and choose the destination.

2. Three Dot Indicator (•••)

The three dots at the bottom usually show that there are more pages.

Users can swipe to see other options.

Unfamiliar Icons

1. Hand Arrow Icon ()

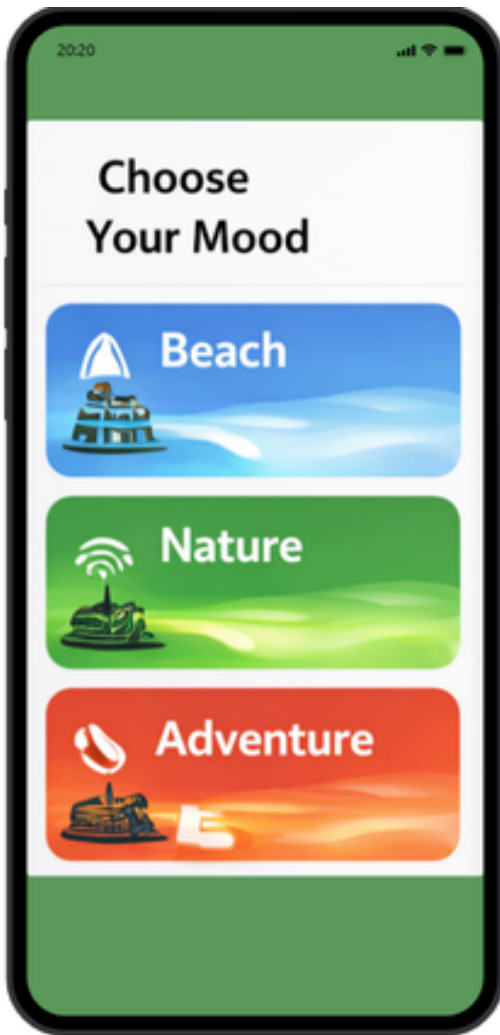

This icon is used for going back to the previous screen.

Normally apps use a simple back arrow, so this hand symbol may feel a little unusual.

2. Fire Icon ()

The fire symbol may represent trending or popular destinations.

But some users may not clearly understand its purpose immediately.

Unfamiliar Icons

1. Mood Options (Beach, Nature, Adventure)

In this screen the user selects a destination based on their mood.

This is a different idea compared to normal travel apps where users directly search for places.

2. Illustration Icons for Each Mood

Each mood option has a small illustration image.

These images help users understand the category visually.

Screen 4 – Spin Wheel Destination

Unfamiliar Icons

1. Spin Wheel

This screen allows the user to spin a wheel to randomly choose a destination.

It looks similar to a game feature rather than a normal travel booking option.

2. “Spin” Button

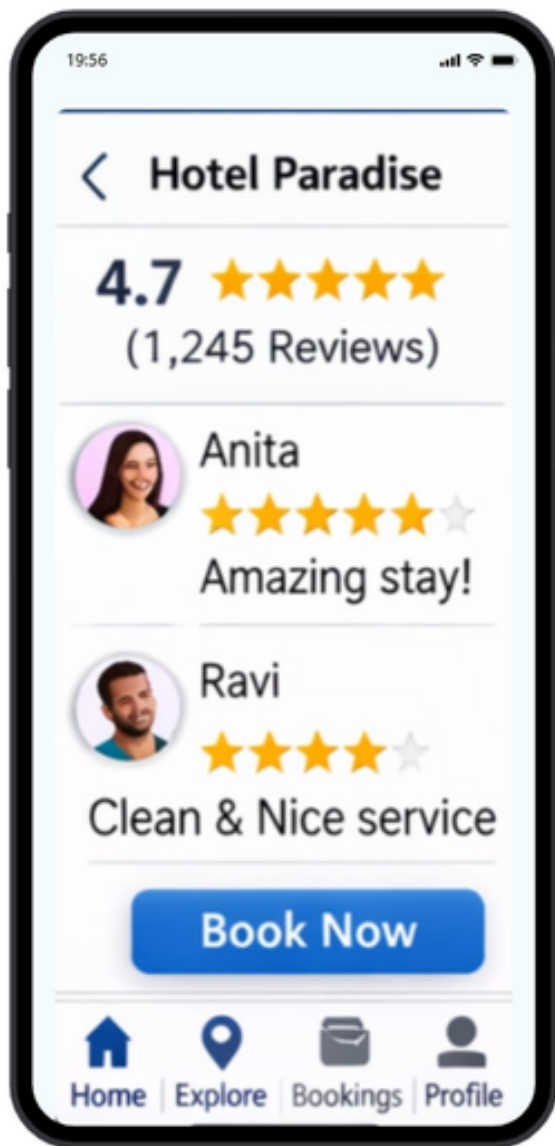

The user taps this button to rotate the wheel.

After spinning, the wheel stops and shows a destination.

3. Pointer Indicator

The pointer at the top shows the final result when the wheel stops spinning.

Screen 5 – Hotel Rating and Review Screen

Familiar Icons

1. Star Rating (★)

Star ratings are commonly used in hotel and product review systems.

It helps users quickly understand the quality of the hotel.

2. User Review Section

The screen shows user profile pictures and their comments.

This feature is normally used in booking and review applications.

3. “Book Now” Button

This button allows the user to start the booking process.

It is a standard action button used in many travel apps.

4. Bottom Navigation Menu (Home, Explore, Bookings, Profile)

This type of navigation bar is very common in mobile applications.

It helps users move between different sections easily.

Screen 6 – Booking Screen

Familiar Icons

1. Search Box

The search box is a common feature used to find hotels or destinations quickly.

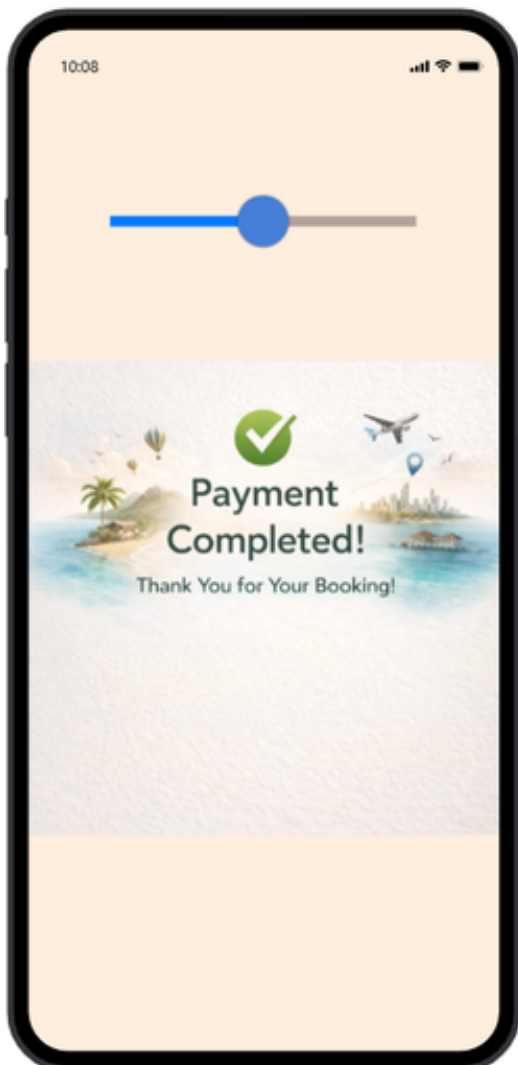

Unfamiliar Icons

1. Eye Icon Inside Search Box

Usually the eye icon is used in password fields to show or hide text.

In this screen it appears inside the search bar, which may confuse some users.

Screen 7 – Payment Screen

Unfamiliar Icons

1. Sliding Bar for Payment

Instead of a normal “Pay” button, this screen uses a sliding bar to confirm the payment.

Users need to slide the bar to complete the transaction.

2. Payment Completion Indicator

The slider visually shows the progress of payment confirmation.

This makes the process interactive but it is not very common in travel booking apps.
