

EXPERIMENT - 5

NAME: PERIYA NAYAGAM M

ROLL NO: 240701382

Conduct task analysis for an app (e.g., Ticket booking) and document user flows create corresponding wireframes.

1. Introduction

- * The Bus Ticket Booking Application is designed to make the ticket booking process simple and convenient for users.
- * Instead of visiting a bus station, users can search for buses, select seats, and book tickets using the application.
- * The system provides information about available buses, timings, and ticket prices.
- * In this document, the task flow of the bus ticket booking process is explained to show how a user completes the booking step by step.

2. Objective

- * To provide an easy and convenient way for users to book bus tickets online.
- * To reduce the time and effort required for traditional ticket booking methods.
- * To allow users to check bus availability, select seats, and confirm bookings in a few simple steps.
- * To design a system that is simple and user-friendly.

3. Task Flow

- * Task flow represents the sequence of steps followed by a user to complete a specific task in an application.
- * In the Bus Ticket Booking Application, the main task is booking a bus ticket.
- * The task flow helps in understanding how the user interacts with the system during the booking process.
- * It also helps designers and developers organize the steps in a clear and logical order.

4. Task Flow Description

- * The process begins when the user opens the bus ticket booking application.
- * The user first selects the preferred language to continue using the application.
- * After that, the user logs into the system or registers if they are a new user.
- * Once logged in, the user enters the travel details such as source, destination, and travel date.
- * The system then displays a list of available buses with details like timing and price.
- * The user selects a bus and chooses the preferred seat from the seat layout.
- * Next, the user enters passenger details such as name, gender, and age.
- * The user also selects the boarding point and dropping point.
- * After completing these details, the user proceeds to the payment page.
- * The user selects a payment method and completes the payment process.
- * If the payment is successful, the system confirms the ticket booking and displays the ticket details.

5. Task Flow Diagram

- * The task flow diagram visually represents the steps involved in the bus ticket booking process.
- * It shows the sequence of actions performed by the user from the beginning of the application until the ticket is successfully booked.
- * This diagram helps to clearly understand how the booking process works in the system.

End

6. Conclusion

- * The task flow helps in understanding the process involved in booking a bus ticket through the application.
- * It explains how users interact with different features of the system step by step.
- * By following this flow, the booking process becomes simple and organized.
- * Overall, the task flow helps in designing an efficient and user-friendly bus ticket booking application.
